Technical writer with a software engineering degree, documenting an enterprise event and venue management platform and its 800+ endpoint REST API at Programus Ltd. Seeking technical writing, documentation engineering, and developer relations roles.

EXPERIENCE

Junior Technical Writer — [Programus Ltd.](#)

Sep 2024 – Present

- Expanded the OpenAPI/Swagger API documentation across descriptions, filters, sorting, includes, and examples; hand-wrote 2,600+ descriptions, then scaled to 7,000+ through source-verified AI-assisted audits.
- Supported client API integrations: built Postman collections for API testing, validated endpoint workflows, answered technical and business queries, and raised confirmed defects with developers.
- Wrote 55 user guides in Adobe RoboHelp, updated 24 after a client review, and authored release notes.
- Produced 10+ custom documents for 6+ enterprise clients, including a 90-page configuration guide and API guides.
- Recorded and edited 40+ tutorial videos in Premiere Pro, later taking over voiceovers.
- Built the team's AI knowledge base for internal API questions.

Trainee Software Engineer — [hSenid Mobile Solutions](#)

Jul 2022 – Jun 2023

- Fixed bugs and shipped features across Applova's web, API, and Android kiosk applications.
- Automated builds and database backup/restore with Bash and Ansible, and wrote release notes for the QA team.

Associate Software Engineer — [Sustainable Education Foundation](#)

Jun 2022 – Jun 2023

- Wrote the SEF volunteer handbook and site content, contributed to ScholarX v2 wireframes, and shipped fixes and features to the website.
- Hosted a Google Summer of Code awareness session and led interviews with ScholarX mentors to gather feedback.

EDUCATION

BEng (Hons) Software Engineering — [University of Westminster, London](#)

Sep 2019 – Jun 2024

Upper Second Class Honours

SKILLS

Documentation & API: OpenAPI/Swagger, REST APIs, JSON, API testing, Postman, docs-as-code, Adobe RoboHelp, Markdown, HTML, CSS

Languages & Frameworks: C#, Java, JavaScript, TypeScript, Python, Ruby, SQL, Spring Boot, React.js, Node.js, jQuery, Bootstrap

Tools & Infrastructure: Claude Code, Git, Azure DevOps, Ansible, Maven, VIM, Bash, Linux, PostgreSQL, MongoDB, Premiere Pro

PROJECTS

Procedurally Generated Serious Game to Promote Learning in Individuals Affected by Trisomy-21

May 2024

Unity3D, C#, Python — undergraduate thesis

- Researched serious games and special education for Trisomy-21, then built the game's UI, gameplay loop and procedural level generation in Unity3D/C#.
- Trained a Python regression model to set each level's ideal length from gene expression data.
